EXAMINER'S AMENDMENT

 An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Justin Blanton on 22 September 2010.

The application has been amended as follows:

Claim 10 is amended as such:

10. A video coding method, comprising, from a sequence of video data:

calculating, via a video coding system, motion vectors for a first picture temporally closest to a reference picture, wherein the reference picture and the first picture temporally closest to the reference picture are part of the sequence;

determining, via the video coding system, a motion speed of the first picture based on the computed motion vectors for the first picture;

for a plurality of pictures in the sequence following the first picture, until a termination condition is met:

Application/Control Number: 10/743,722

Art Unit: 2483

calculating, via the video coding system, motion vectors for [[the]] \underline{a} respective picture in the plurality of pictures,

determining, via the video coding system, a motion speed for the respective picture based on the calculated motion vectors for the respective picture,

comparing, via the video coding system, the motion speed of the respective picture with the motion speed of the first picture, and

coding, via the video coding system, the respective picture as a B picture if the motion speeds are consistent with each other; and

when the termination condition is met, coding, via the video coding system, the respective picture as a P picture.

2. The following is an examiner's statement of reasons for allowance: As discussed in the interview of 18 August 2010, the claims as currently amended are now patentably distinct over the teachings of the closest prior art, U.S. Patent No. 7,058,130, ("Liu") which does not disclose the claimed comparison of the motion speed of a first picture in a plurality of pictures following a reference picture in a video stream with the motion speeds of the remaining plurality of pictures in the plurality of pictures, and using this comparison to determine picture type. The Liu patent compares at most two pictures

following the reference picture: the first picture following the reference picture, and only more one picture, not a plurality of pictures.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Information Disclosure Statement

3. The Information Disclosure Statement filed 8 July 2010 contains a citation to U.S. Patent No. 5,116,287 A, which is directed to an internal combustion engine component and appears to have no relevance to the present invention. Applicant is requested to confirm that this reference, not another with a similar patent number, was intended to be cited.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent Application Publication No. 2003/0142747 A1 ("Obata") discloses an MPEG video encoder that sets the structure of a Group of Pictures (GOP) as either conforming or deviating from a standard structure.
